PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/586,712	<b>Applicant(s)</b> YASUMI ET AL.
	<b>Examiner</b> DEREK J. ROSENAU	<b>Art Unit</b> 2837

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 21 August 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 1-4 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-4 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fujii et al. (WO 2003/052840) in view of Watanabe et al. (US 6153898) and Shimada et al. (US 5802686).

3. With respect to claim 1, Fujii et al. discloses an angular velocity sensor (Fig 15) comprising: a substrate (item 500) made of single crystal silicon (Paragraph 217) and having a tuning fork shape (Fig 15), the substrate including a plurality of arms extending parallel with each other (Fig 15), and a joint section for connecting respecting ends of the arms with each other (Fig 15); a first adhesion layer (Fig 1, item 12) provided on the substrate (Fig 1), the first adhesion layer containing titanium (Paragraph 71); a first electrode layer (item 503) provided on the first adhesion layer (Fig 16), the first electrode containing at least one of titanium and titanium oxide (Paragraph 19); an orientation control layer (item 504) provided on the first electrode layer (Fig 16); a piezoelectric layer (item 505) provided on the orientation control layer (Fig 16); and a second electrode layer (item 506) provided on the piezoelectric layer (Fig 16).

Fujii et al. does not disclose expressly a barrier layer provided on each of the plurality of arms of the substrate, the barrier layer containing silicon oxide; the first

Art Unit: 2837

adhesion layer being provided on the barrier layer, or a second adhesion layer provided on the piezoelectric layer with the second electrode being formed on the second adhesion layer.

Watanabe et al. teaches a piezoelectric device including a barrier layer (item 12) provided on the substrate (Fig 1), the barrier layer containing silicon oxide (column 3, lines 51-60); the adhesion layer (item 13) being formed on the barrier layer (Fig 1).

Shimada et al. teaches a piezoelectric device in which an adhesion layer is provided between the piezoelectric layer and the top electrode layer (column 7, lines 40-50); therefore, Shimada et al. discloses a second adhesion layer provided on a piezoelectric layer and a second electrode provided on the second adhesion layer.

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine the barrier layer of Watanabe et al. and the second adhesion layer of Shimada et al. with the angular velocity sensor of Fujii et al. for the benefits of preventing diffusion (column 3, lines 51-60 of Watanabe et al.) and to improve the bond between the piezoelectric layer and the top electrode (column 7, lines 40-50 of Shimada et al.).

4. With respect to claim 2, the combination of Fujii et al., Watanabe et al., and Shimada et al. discloses the angular velocity sensor of claim 1. Fujii et al. discloses that the orientation control layer comprises dielectric oxide material containing Pb and Ti (Paragraph 73)

5. With respect to claim 3, the combination of Fujii et al., Watanabe et al., and Shimada et al. discloses the angular velocity sensor of claim 1. Fujii et al. discloses that

Art Unit: 2837

the orientation control layer comprises lead titanate containing at least one of La and Mg (Paragraph 73).

6. With respect to claim 4, the combination of Fujii et al., Watanabe et al., and Shimada et al. discloses the angular velocity sensor of claim 1. Fujii et al. discloses that the piezoelectric layer comprises lead zirconate titanate (Paragraph 230).

### ***Response to Arguments***

7. Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DEREK J. ROSENAU whose telephone number is (571)272-8932. The examiner can normally be reached on Monday thru Thursday 7:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Walter Benson can be reached on (571) 272-2227. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
